

JETMATE working tool

HAMMELMANN®

The JETMATE enables recoil-free operation during the cleaning process, is easy to handle and ensures increased occupational safety. Simple handling and increased occupational safety – these are the demands seen in the modern working environment. We are able to meet these requirements thanks to the continuous, practical development of our high-pressure systems. Ease of use and safety are always the first priority here.

Your advantages at a glance

- High freedom of movement due to two freely movable rotary axes and one pneumatically driven linear axis
- Low effort required for operation due to floating bearing of lance and mold
- Flexible application possibilities thanks to modular design
- Fatigue-free and safe work, even with the highest recoil forces (300 N)
- Variable use through mounting on various carrier systems

Safe with low impact on the body thanks to recoil-free operation.

The recoil forces are absorbed by the holding device. An additional protective divider is available to separate the operator from the work area.

Various configuration options

Installation in a container

Mounted on carrier system

Mobile JETMATE containers

JETMATE with carrier system

Technical details JETMATE

Operating Pressure	Recoil pickup
up to 3000 bar	up to 300 N

Weight and dimensions depend on accessories and water tools. Binding dimensional drawings and weights on request.
